

W.O.W. WHAT A DIFFERENCE SAFE WATER MAKES!

WATER ON WHEELS DISASTER RESPONSE SYSTEM

WHAT IS W.O.W.? A small, portable, mini-water treatment system quickly deployed on site until infrastructure is restored. Capable of providing thousands of gallons of **Safe Water** a day.

In a disaster, **Safe Water** is the greatest need.

Bottled water is expensive, heavy and difficult to transport. Reverse osmosis systems are complicated. They require technical assistance, lots of power and must be carried on a trailer. The W.O.W. cart is a better alternative.

Now, virtually anyone working in a disaster can produce large amounts of **Safe Water** for drinking, cooking, cleaning, bathing, etc.

Safe Water on site is just minutes away.

WHO NEEDS W.O.W.?

Anyone needing water
& disinfectant on site.

- Forest Firefighters
- Rural Water Associations
- Emergency Management
- NGO & Corporate Disaster Relief Teams
- Hospitals, Clinics & Nursing Homes

*W.O.W. in action at EPA
Water Security Test Bed*

W.O.W. COMPONENTS:

- Fillable Filter Canisters
- Duel Fuel Generator
- ChlorineGenerator
- Self-Illuminated
- (2) BleachMakers for Disinfectant
- Communication Charging Ports
- Optional UV Sanitation
- Solar & 12v Battery
- ¾ -1HP Jet Pump
- Distribution Manifolds
- Encased Steel Tubular Frame
- (2) 1,250 Gallon Bladder Tanks

ACCOLADES:

- 2013 Denmark's Sustainia Award for Top 100 Global Solutions to Impact the World
- 2016 Environmental Protection Product of the Year
- 2018 Federal Labs Consortium CRADA Success Award with the U.S. EPA Office of Research and Development
